

The estimated critical path is highlighted in blue, and the actual critical path is highlighted in red.

Using the technique listed in the README, we estimated that the critical path would be  $6.384 \text{ ns} + 6.820 \text{ ns} + 5.361 \text{ ns} = 18.565 \text{ ns}$ .

The actual critical path was 7.646 ns.
